TRANSPORTATION MANAGEMENT SYSTEM (TMS)

ClearPath TMS and Load Manager EPOD App

No Boundaries uses ClearPath TMS and the ClearPath Load Manager App for the API integration and EDI file delivery for real-time data transmission. The Load Manager App platform documents and tracks the tender, departure, AIAG inspections, and delivery each step of the vehicle transport process to ensure our customers have access to their data for each step of the process.

HOW OUR **KEY PARTNERS** INVEST IN NBAL

1. PREDICTABILITY AND PLANNING

Stable Demand:

Level volumes enable accurate demand forecasting, ensuring proper capacity planning and the right amount of trucks and personnel.

Efficient Route Planning:

Steady volumes allow for optimized routes, reducing transportation costs and improving delivery times.

2. OPERATIONAL EFFICIENCY

Resource Utilization:

Consistent volumes maximize vehicle and driver usage, reducing downtime and improving cost control.

Inventory Management:

Predictable volumes help maintain optimal stock levels, avoiding overstocking or understocking and reducing storage costs.

3. COST CONTROL

Reduced Overtime and Shipping Costs:

Steady volumes minimize the need for overtime and expensive shipping methods, lowering operational costs with predictable workloads.

Fuel Efficiency:

Consistent shipments improve load management, leading to more predictable fuel consumption and reduced fuel costs.

CREATING EFFICIENCY BY COMBINING TRANSPORTATION LANES

KEY BENEFITS

Combining lanes reduces empty miles, cutting fuel consumption and carbon emissions.

WHY IT MATTERS:

- ✓ Fleet efficiency and Reduction of Impact on Environment.
- ✓ Strong KPIs (On-time deliveries, fuel efficiency, cost savings).
- ✓ **In Calendar 2024 NBAL was Nissan USA's #1 Carrier in Velocity from Origin to Destination.**
